FOR IMMEDIATE RELEASE

**ATLAS TO PARTICIPATE AT HIMSS 2012 ANNUAL EXHIBITION
AND HIMSS INTEROPERABILITY SHOWCASE**

Calabasas, CA, February 15, 2012, Atlas Development Corporation today announced plans to participate at the HIMSS 2012 Annual Conference and Exhibit, and the HIMSS Interoperability Showcase, both of which will be held at the Venetian Sands Expo Center from February 21-24, 2012 in Las Vegas, Nevada.

The Company will be exhibiting its iOn™ Interoperability Network, including the Public Health Reporting Service, in the InterSystems Corporation Booth #3045 of the HIMSS 2012 Annual Conference and Exhibition, located in Hall C at the Venetian Sands Expo. ATLAS representatives will be available to discuss the natural intersect that is occurring between the public and private health sectors, specifically highlighting the Company's iOn Interoperability Network that provides powerful integration services and business rules between diagnostic testing facilities, electronic medical record systems (EMRs/EHRs) and public health agencies. ATLAS is an InterSystems Application Partner, providing solutions to its customers that incorporate the InterSystems Caché database technology.

During the HIMSS 2012 Interoperability Showcase, ATLAS will use its Guardian™ suite of public health software, including EHR Gateway, and its Public Health Reporting Service, to demonstrate how a health department can receive electronic lab reports (ELRs) from electronic systems by utilizing the standards outlined by IHE within the Patient Care Coordination Technical Framework. The Company will demonstrate XDR and XD-LAB profiles, participating as a state-level health department under the CDC funded project for public health, Booth #11000 in Hall G.

The XDR profile provides a reliable and automatic transfer of documents and metadata for one patient between EHR systems, even in the absence of a document sharing infrastructure. In conjunction with XDR profile, the Company will demonstrate the XD-Lab profile for transmitting ELRs via HL7 Clinical Data Architecture in fulfillment of public health reporting requirements as well as "Meaningful Use".

For ATLAS exhibit times or to schedule an appointment, please contact Michelle Del Guercio at 818.224.6229 or mdelguercio@atlasdev.com.

More information about the HIMSS 2012 Conference and the HIMSS Interoperability Showcase can be found at www.himssconference.org.

About Atlas Development

Atlas Development Corporation, a privately held company with more than 21 years of service delivering mission-critical solutions to health industry leaders, operates three divisions: Atlas Medical, Atlas Public Health and Atlas Consulting. Our

Medical division provides a suite of industry leading connectivity solutions to hundreds of national and regional commercial providers of diagnostic testing and hospital outreach programs accessed by more than 75,000 physicians and clinicians every day. Atlas Public Health provides mission critical software solutions to enable health professionals to protect and promote the well-being of the community. Atlas Consulting works with organizations to create and implement software solutions that deliver operational efficiency. For more information about Atlas Development, visit www.atlasdev.com.
